SOUTHERN FLOW CORRIDOR

A Collaborative Success

Born out of the critical need to **mitigate recurrent flooding** in the City of Tillamook, the SFC project brought together **more than 100 federal, state, and local partners.**

Solutions for Fish and People

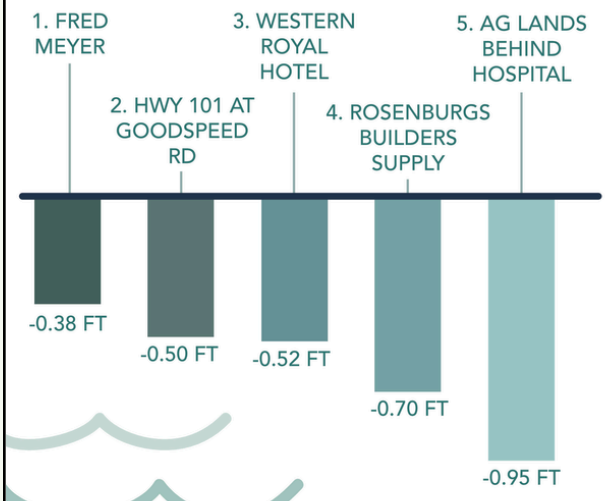

- **Removed failing levees and tidegates and installed new ones in better locations.**
- **Reconnected 14 miles of tidal channels.**
- **Created a directed corridor for floodwaters.**

Long-Term Benefits

©Elise Wahl

FLOOD LEVEL

Between Hoquarton Slough and the Wilson River, flood levels were reduced by around **SIX TO NINE INCHES**.

FLOOD DURATION

Roadway flooding of Highway 101 was delayed **ONE TO TWO HOURS** and floodwaters receded from road surface **TWO HOURS FASTER**.

FLOOD EXTENT

4,800 ACRES experienced a reduction in flooding, benefiting 540 residential, commercial, & agricultural structures.

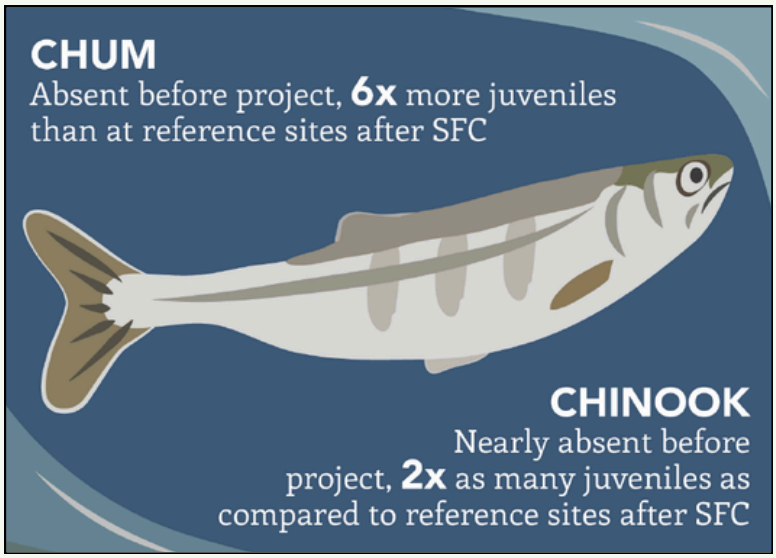

PROJECT SUMMARY

The Southern Flow Corridor - Landowner Preferred Alternative project is a **community-driven** endeavor to build resiliency back into the local environment. The 690 acres project addressed **commercial, residential, agricultural and environmental needs** through restoration of 443 acres of tidal wetlands habitat, permanent conservation of 504 acres, and construction of about 1.5 miles of new setback levees.
